

PWS Information

Purpose of this worksheet: For water systems to document basic system information.

Facility Information			
Water System Name: OWL CREEK WATER SYSTEM			
PWSID: WY5601673	Population Served (number of people): 62	Number of Service Connections: 62	PWS Type: <input checked="" type="checkbox"/> CWS <input type="checkbox"/> NTNCWS
If you are a CWS, do multi-family residences comprise at least 20% of the structures you serve?			Yes
Mailing Address			
P.O. Box 662			
City or Town: Thermopolis	State: WY	Zip Code: 82443	
System Contact Person			
Name: Rose Basko		Title: Board Secretary	
Telephone: 307-660-5459		Email: OCWD17@gmail.com	
Person Who Prepared Inventory (if different from above)			
Name:		Title/Affiliation:	
Telephone:		Email:	

Inventory Methodology

PWS Name: OWL CREEK WATER SYSTEM

PWSID: WY5601673

Enter Date Last Updated:

Purpose of this worksheet: For water systems to document the methods and resources they used to develop and update their inventory.

Part 1: Historical Records Review

Type of Record	Describe the Records Reviewed for Your Inventory and Indicate Your Level of Confidence (e.g., Low, Medium, or High)
1. Previous Materials Evaluation <i>Example: Locations of Tier 1 lead tap sampling locations that are served by a lead service line.</i>	N/A No lead lines.
2. Construction Records and Plumbing Codes <i>Examples: Local ordinance adopting an international plumbing code. Permits for replacing lead service lines.</i>	Our system was installed in 2014. All main and service lines are Plastic. We have numerous "as built" maps indicating that all main system lines are PVC. During the system installation process, the contractor that installed the mains also installed the service lines. High confidence
3. Water System Records <i>Examples: Capital improvement plans. Standard operating procedures. Engineering standards.</i>	Reviewed "as built" maps, GIS engineering maps, operator maintenance reports, cost sheets detailing repairs. High
4. Distribution System Inspections and Records <i>Examples: Distribution system maps. Tap cards. Service line repair/replacement records. Inspection records. Meter installation records.</i>	We have GIS maps showing all our taps and hydrants. We meter our flushing and usage by each customer and can determine if there are leaks from these sources. The operator keeps a detailed record of inspections and readings which can be compared with the Town's readings for water loss. High
5. Additional Records Required by Your State	All our records are kept on the cloud on Drive and can be viewed upon request. We have a district email and website. Physical records are kept in a storage building by the pumphouse. We also maintain records of minutes at the county courthouse per statutes. High.
6. Other Records	

Part 2: Identifying Service Line Material During Normal Operations

1. During which normal operating activities are you collecting information on service line material? Check all that apply.

- | | |
|--|---|
| <input checked="" type="checkbox"/> Water meter reading | <input checked="" type="checkbox"/> Water main repair or replacement |
| <input checked="" type="checkbox"/> Water meter repair or replacement | <input checked="" type="checkbox"/> Backflow prevention device inspection |
| <input checked="" type="checkbox"/> Service line repair or replacement | <input type="checkbox"/> Other |

If "Other", please explain:

2. Did you develop or revise standard operating procedures to collect service line material information during normal operation? No

If "Yes", please describe:

Part 3: Service Line Investigations

1. Identify the service line investigation methods your system used to prepare the inventory (check all that apply). If a water system chooses an investigation method not specified by the state under 40 CFR §141.84(a)(3)(iv), state approval is required. **Note that investigations are not required by the LCRR but can be used by systems to assess accuracy of historical records and gather information when service line material is unknown.**

- | | |
|--|--|
| <input checked="" type="checkbox"/> Visual Inspection at the Meter Pit | <input checked="" type="checkbox"/> Water Quality Sampling - Other |
| <input type="checkbox"/> Customer Self-Identification | <input type="checkbox"/> Mechanical Excavation |
| <input type="checkbox"/> CCTV Inspection at Curb Box - External | <input type="checkbox"/> Vacuum Excavation |
| <input type="checkbox"/> CCTV Inspection at Curb Box - Internal | <input type="checkbox"/> Predictive Modeling |
| <input type="checkbox"/> Water Quality Sampling - Targeted | <input checked="" type="checkbox"/> Other |
| <input type="checkbox"/> Water Quality Sampling - Flushed | |
| <input type="checkbox"/> Water Quality sampling - Sequential | |

If "Other", please explain:

The customer owns the service line. The district is only responsible for the mains to the meter at the tap. However, when taps and service lines are installed, our Rules and Regulations require that the installation to the tap must be supervised by our operator. All of the service lines were installed under the operator and engineer's supervision as part of the regular tap fees when the system was installed in 2014. Our operator continues to work closely with contractors involved in pit and service line installations.

2. If "Predictive Modeling", please briefly describe the model and inputs used:

3. How did you prioritize locations for service line materials investigations? For example, did you consider environmental justice and/or sensitive populations, did you use predictive modeling, and/or did you target areas with high number of unknowns?

We keep records of meter readings and compare monthly uses. If a customer uses an unusual amount, we contact the customer to make them aware. In the few instances we've had of leaks in service lines, our operator has worked with and inspected repairs done by contractors.

Inventory Summary

PWS Name: OWL CREEK WATER SYSTEM

PWSID: WY5601673

Enter Date Last Updated:

Purpose of this worksheet: For water systems to provide a summary of their service line inventory, including information on ownership, inventory format, and the number of service lines for each of the four required materials classifications.

Part 1. General Information

1. Is this the Initial Inventory or an Inventory Update ?	<i>Initial Inventory</i>
2a. Who owns the service lines in your system? <i>If other, please explain below.</i>	<i>The entire service line is owned by the customer</i>
2b. Is there documentation that defines service line ownership in your system, such as a local ordinance? <i>If yes, please describe below and explain where ownership is split (e.g., property line, curb stop).</i>	<i>Yes</i>
Our Rules and Regulations clearly spell out that, after the point of the meter, the customer is responsible for the service line, connections and other apparatus. There is NO split ownership of any lines.	
3a. Describe when lead service lines were generally installed in your system.	
N/A - There are no lead service lines in our system	
3b. When were lead service lines banned in your system? Reference the state or local ordinance that banned the use of lead in your system.	
Our system was installed in 2014, well beyond the dates of national and state service bans.	
4. Do you have lead goosenecks, pigtails or connectors in your system?	<i>No</i>
5. What is your overall level of confidence in the inventory (<i>i.e.</i> , "Low", "Medium", or "High.") Please explain your rationale below.	
High - this is a new system installed in 2014.	

Part 2. Inventory Format

Describe your inventory format in the space provided below (*e.g.*, the **Detailed Inventory** worksheet, custom spreadsheet, GIS map). Provide the filename and/or web address if applicable. **Note that the state may require you to submit your detailed inventory of each service line in your distribution system.**

The Detailed Inventory worksheet was used to prepare this inventory. It will be called EPA Lead-Copper Inventory 2024.PDF in our Drive and can be given out to customers. In addition, it will be uploaded to our website - OwlCreekWaterDistrict.com.

Part 3. Inventory Summary Table ¹

If you are using the **Detailed Inventory** worksheet, the classifications you select in the Column "Entire Service Line Material Classification" (Column X) will be used to calculate the total number of service lines for each of the four material classifications below. Otherwise, enter the number of service lines in the aqua-colored cells. **Remember this is the classification for the entire service line.**

Service Line Material Classification	Definition	Total Number of Service Lines (REQUIRED to be reported under the LCRR)
Lead	Any portion of the service line is known to be made of lead. ²	0
Galvanized Requiring Replacement (GRR)	The service line is not made of lead, but a portion is galvanized and the system is unable to demonstrate that the galvanized line was never downstream of a lead service line.	0
Non-Lead	All portions of the service line are known NOT to be lead or GRR through an evidence-based record, method, or technique.	62
Lead Status Unknown	The service line material is not known to be lead or GRR. For the entire service line or a portion of it (in cases of split ownership), there is not enough evidence to support material classification.	0
TOTAL		62

Notes

¹ This summary table is for reporting material for the entire service line connecting the water main to the customer's plumbing. See the **Classifying SLs** worksheet for additional guidance on assigning a materials classification to the entire service line when ownership is split. Remember that systems must track the system-owned and customer-owned portions separately in their inventory.

² A lead-lined galvanized service line is consistent with the definition of an LSL under the LCRR ("a portion of pipe that is made of lead, which connects the water main to the building inlet") (40 CFR §141.2) and must therefore be classified in the inventory as an LSL. Do NOT, however, count non-lead service lines with a lead gooseneck or pigtail as lead service lines unless required by your state.

Public Accessibility Documentation

PWS Name: OWL CREEK WATER SYSTEM

PWSID: WY5601673

Enter Date Last Updated:

Purpose of this worksheet: For systems to provide documentation to states on how they met the public accessibility requirements of the LCRR.

1. Select the location identifiers that you use for your service line inventory. Check all that apply.

- Address
- Street
- Block
- Intersection
- Landmark
- GPS Coordinates
- Other

If "Other", please describe:

Names

2. Does **every service line** have a location identifier?

Yes

If "No", explain. Remember that location identifiers are required for service lines that are lead and galvanized requiring replacement.

3. How are you making your inventory publicly accessible? Check all that apply. Remember that if your system serves > 50,000 people, you **must** provide the inventory online.

- Interactive online map
- Static online map
- Online spreadsheet
- Printed service line map
- Printed tabular data
- Information on water utility mailings or newsletter
- Hard copy information available in water system office
- Other

If "Other", please describe:

Customers will be given link of the inventory stored on the Cloud when bills are sent out. We will also upload the inventory to our website: OwlCreekWaterDistrict.com. A hard copy will be posted at McCumber Well Service where we also post our Consumer Confidence Report.
